

The **DRAW ALIGNER PRO** is perfect for pulling out large dents. Its powerful hydraulic system provides up to **1.2 metric tons** of effortless traction. Fully adjustable and easy to move, this innovative device can be used for straightening out a car's underbody, wings and quarter panel.

INDUSTRY-LEVEL INNOVATION

- Its hydraulic system offers a maximum pulling force of 1.2 metric tons
- No effort required, its hydraulic pump works like a conventional hydraulic jack
- The pulling arm can be tilted back and its height is adjustable meaning it can pull in any direction
- Its under-wheel support plate makes it possible to pull out dents from the vehicle's rear
- Its lateral support arm and its anti-roll bar guarantee stability
- Its simple set up allows for quick and efficient dent pulling
- Mobile and lightweight, it can be easily moved around the workshop

INCLINED DENT PULLING

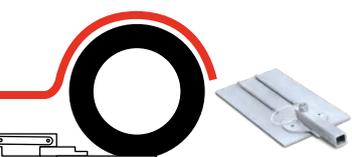

The vertical pull bar can be tilted to the left and right, this allows the pulling direction to be adjusted +/- 45°.

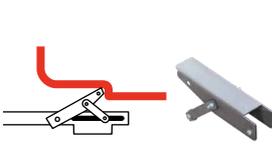

The under-wheel chuck means even quarter-panel damage can be pulled out.

ACCESSORIES (INCLUDED)
